Notes:

1. Data based on twelve monthly samples during 2000. For information on confidentiality protection sampl
nonsampling error, and definitions see explanation at http://factfinder.census.gov/home/en/datanotes/exp_

2. The Census 2000 Supplementary Survey universe is limited to the household population and excludes t
population living in institutions, college dormitories and other group quarters.

3. Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an e
is represented through the use of a confidence interval. The confidence interval computed here is a 90 pe
confidence interval and can be interpreted roughly as providing 90 percent certainty that the true number
between the lower and upper bounds.

4. The number of householders does not necessarily equal the number of households because of differenc
in the weighting schemes for the population and occupied housing units.
